

Yusra Sakti Wardhana

Data Scientist | Data Analyst | Analytics Engineer

South Tangerang, Indonesia | +6282294917848 | sakti.wardhana10@gmail.com | [LinkedIn](#)

Professional Summary

Data Scientist with 2+ years of experience bridging data engineering, advanced AI analytics, and business intelligence visualization for enterprise media monitoring platforms. Specialized in translating complex client requirements into stakeholder ready insights, scoping ML based analyses, and coordinating cross functional engineering teams to ship production grade applications. Proven hands on expertise in deploying LLM solutions, managing data streams, and designing 50+ interactive dashboards that drive real world decision making.

WORK EXPERIENCE

Data Scientist | PT Ebdesk Teknologi

August 2023 – Present

- Managed analytics product lifecycle end to end, from defining business requirements and dashboard conceptualization to coordinating across Data Engineering, AI/ML, and Frontend teams, successfully shipping features for 10+ enterprise and government clients.
- Spearheaded R&D and architectural conceptualization of an AI driven document management system integrating AWS S3, Apache Kafka, and Qdrant Vector DB, enabling intelligent document retrieval with sub-200ms query latency across 100K+ documents.
- Built cross analytic NLP pipelines using Python and LLMs to perform real time sentiment analysis and political trend tracking during the 2024 Indonesian national election cycle, processing 2M+ social media and news data points with >82% sentiment classification accuracy.
- Designed and delivered 50+ interactive media monitoring dashboards (React, ECharts, SQL/NoSQL) adopted by 10+ enterprise and government clients, reducing manual reporting time by 60%.
- Created intuitive UI/UX mockups and managed end to end QA testing across web and mobile platforms, identifying 30+ critical bugs pre-launch across 3 product lines to ensure complete system stability.
- Collaborated cross functionally with frontend, backend, and AI teams to translate business requirements into production features, serving as the bridge between strategic analytics and engineering delivery.

EDUCATION

Bachelor of Statistics | Islamic University of Indonesia (UII), Yogyakarta
Faculty of Mathematics and Natural Sciences | GPA: 3.76 / 4.00

2019 – 2023

PROJECT

Steam Local Video Game Reviews: Sentiment & Topic Modeling

- Applied Naive Bayes classification and Latent Dirichlet Allocation (LDA) to 10,000+ Indonesian language Steam reviews to identify dominant sentiment patterns and latent topic clusters across game genres.
- Achieved 81% classification accuracy on held out test set; findings used to benchmark NLP preprocessing techniques for low resource Bahasa Indonesia text classification task.

SKILLS

Programming & Frontend: Python, JavaScript, HTML5, CSS3, React

Data Science & ML: Machine Learning, NLP, Sentiment Analysis, LLMs, Feature Engineering, Statistical Modeling, Scikit-Learn, Data Visualization (ECharts, React)

Data Engineering: Apache Kafka, ETL/ELT Pipeline Design, Data Stream Processing, Qdrant Vector DB

Databases & Search: Elasticsearch, PostgreSQL, MySQL

Cloud & Infrastructure: AWS S3

Soft Skills: Cross-functional Collaboration, Stakeholder Management, Analytical Thinking, Ownership & Quality Orientation

Languages: Bahasa Indonesia (Native), English (Intermediate)

CERTIFICATIONS

- DQLab: Introduction to Data Science with Python [Credential](#)
- DQLab: Database SQL Track [Credential](#)
- Myskill: Data Science [Credential](#)
